Section 1 · Projects vs. Operations & The Project Life Cycle

CHECK-IN RESPONSE

A project is temporary work that has a specific goal and an expected ending, while an operation is ongoing work that keeps a business or service running. An example of an IT project would be migrating a company's servers from an on-premises data center to Google Cloud. Once the migration is completed and accepted, the project is finished. An example of an IT operation would be monitoring and maintaining those cloud servers after the migration. That work continues as long as the company uses the systems.

Section 2 · Traditional vs. Agile Approaches

CHECK-IN RESPONSE

I would recommend a blended approach. A predictive approach would be useful for regulatory requirements, documentation, approvals, and major implementation milestones, while an adaptive approach would allow the team to gather feedback from hospital staff and make adjustments as they learn more about their needs. This gives the project structure without preventing the team from adapting when necessary.

Section 3 · The Leadership Landscape of a Technology Organization

CHECK-IN RESPONSE

A Project Manager focuses on organizing and coordinating the project, including the schedule, risks, resources, and communication with stakeholders. Developers focus on the technical work needed to create a usable product. Their work connects because the Project Manager needs information from the developers to understand progress, risks, and whether deadlines are realistic. Confusion could happen if a Project Manager tries to make technical decisions without consulting the developers, or if developers make changes that affect the schedule or project requirements without communicating them. Clear responsibilities and communication help both sides work toward the same project goal.

Section 4 · GitHub Portfolio Setup

REPOSITORY URL

<https://github.com/TheFabiyo/IT3310-ProjectPortfolio>

Section 5 · Onboarding Confirmation Checklist

[X] Course syllabus reviewed

[X] NovaTech scenario understood

[X] GitHub account created

- [X] IT3310-ProjectPortfolio repository created
- [X] Folder structure created
- [X] README.md updated and committed
- [X] Repository URL entered
- [X] All check-in questions answered
